What is a dependency ratio?

An "old age" dependency ratio is the number of people age 65+ per 100 "working age" people age 20-64. It is therefore intended to measure burden on the working population to provide pensions and support for retirees.

How does New Zealand compare?

The old age dependency ratio in New Zealand is 25.6. This means there are 25.6 people age 65+ per 100 people age 20-64. Based on this ratio, New Zealand ranks #33 out of 201 nations and territories in the world, and #1 out of 2 in Australia/New Zealand, in terms of pressure on working populations to support retirees.

Median Age: 1970-2040

In 2015, the median age in New Zealand was 38.0. The country ranks #48 out of 201 nations and territories in the world, and #1 out of 2 in Australia/New Zealand.
