## "Old Age" Dependency Ratio

Canada

Northern America

Northern America

World

Sources: United Nations Population Division, World Bank, Baxter Consulting Group calculations

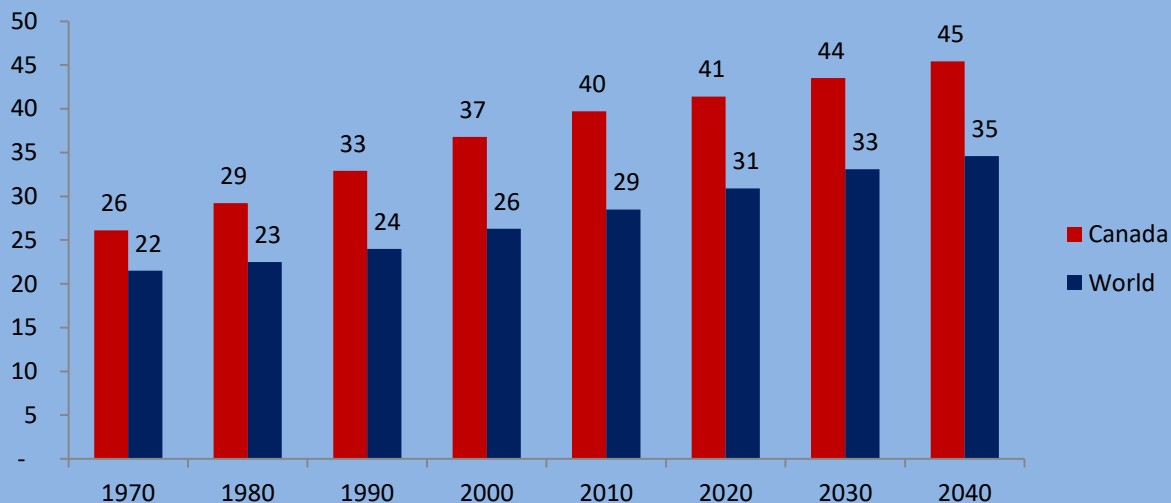

### What is a dependency ratio?

An "old age" dependency ratio is the number of people age 65+ per 100 "working age" people age 20-64. It is therefore intended to measure burden on the working population to provide pensions and support for retirees.

### How does Canada compare?

The old age dependency ratio in Canada is 26.0. This means there are 26.0 people age 65+ per 100 people age 20-64. Based on this ratio, Canada ranks #31 out of 201 nations and territories in the world, and #1 out of 2 in Northern America, in terms of pressure on working populations to support retirees.

## Median Age: 1970-2040

In 2015, the median age in Canada was 40.6. The country ranks #31 out of 201 nations and territories in the world, and #1 out of 2 in Northern America.
